

A wide-angle photograph of Niagara Falls, showing the water cascading over the rocks and creating a large plume of white mist. The sky is filled with soft, white clouds, and the water in the foreground is a deep blue-grey color.

Niagara Region's Use of Value Engineering for Water & Wastewater Projects

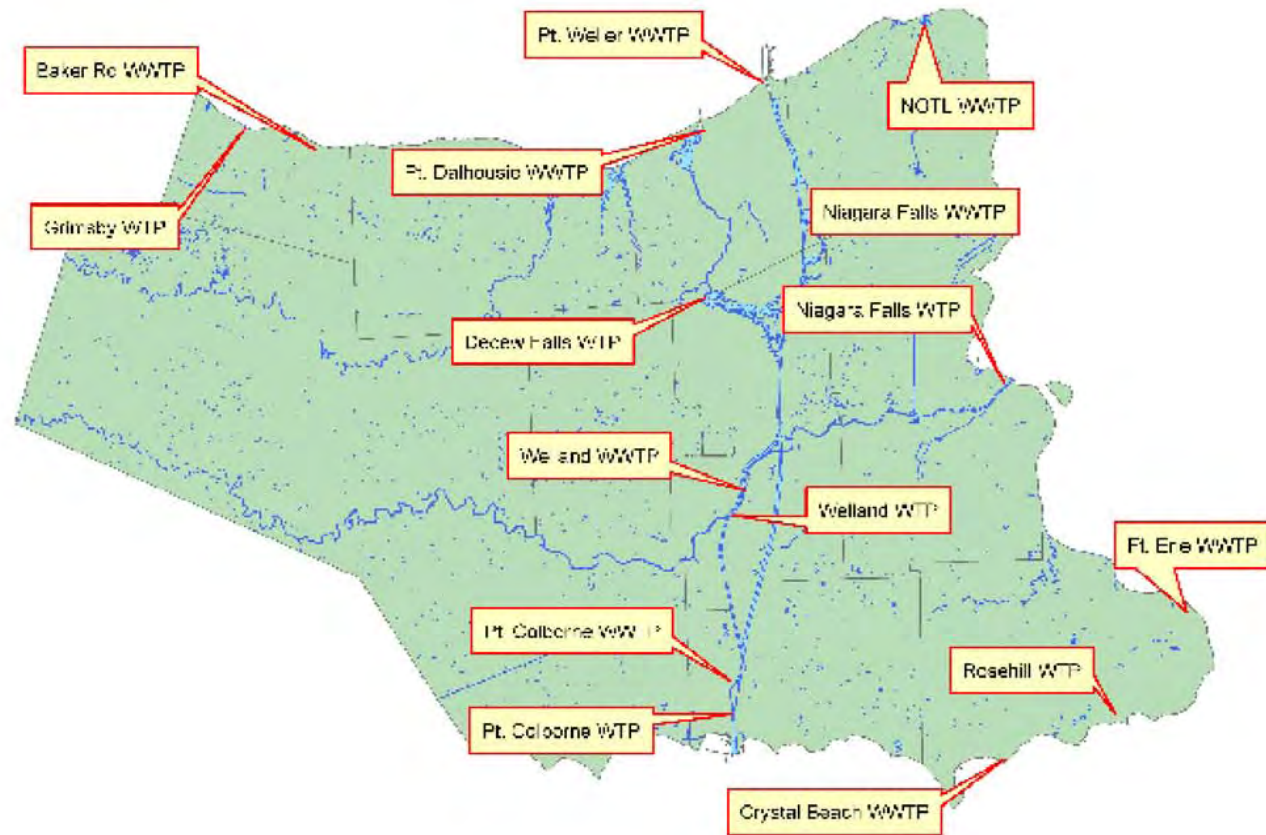

Chado Brcic P. Eng., Director
Water & Wastewater Services
Regional Municipality of Niagara

CSVA Conference – Markham, Oct. 26th/04

Niagara  Region

Overview

- ◆ Why VE
 - ◆ 2 sample projects
 - ◆ Key benefits
 - ◆ Go – Forward VE application
 - ◆ Don't leave
- 

Water & Wastewater Facilities

Value Engineering in Niagara

- ◆ Sporadic over 10 years
 - NOTL pumping station
 - Ft. Erie conversion of F/M to storm sewer
 - Others – accidental
- ◆ Last 2 years
 - New manager of Eng. Projects
 - Past experience
 - Policy to do VE on categories of projects
 - Council approval . Report Dec. 2003
 - ◆ \$10 m. plus projects
 - ◆ \$5 – 10 m. projects
 - ◆ Implemented in 2003

Value Engineering Projects

- ◆ Combined sewer overflow (CSO) and High Rate Treatment (HRT) project in Niagara Falls
- ◆ Water Treatment plant upgrade in Welland
- ◆ Secondary Projects
 - Welland CSO/Separation
 - Wainfleet Water & Sewer Servicing
- ◆ Cost Ranges from 1 to 1 ½ %

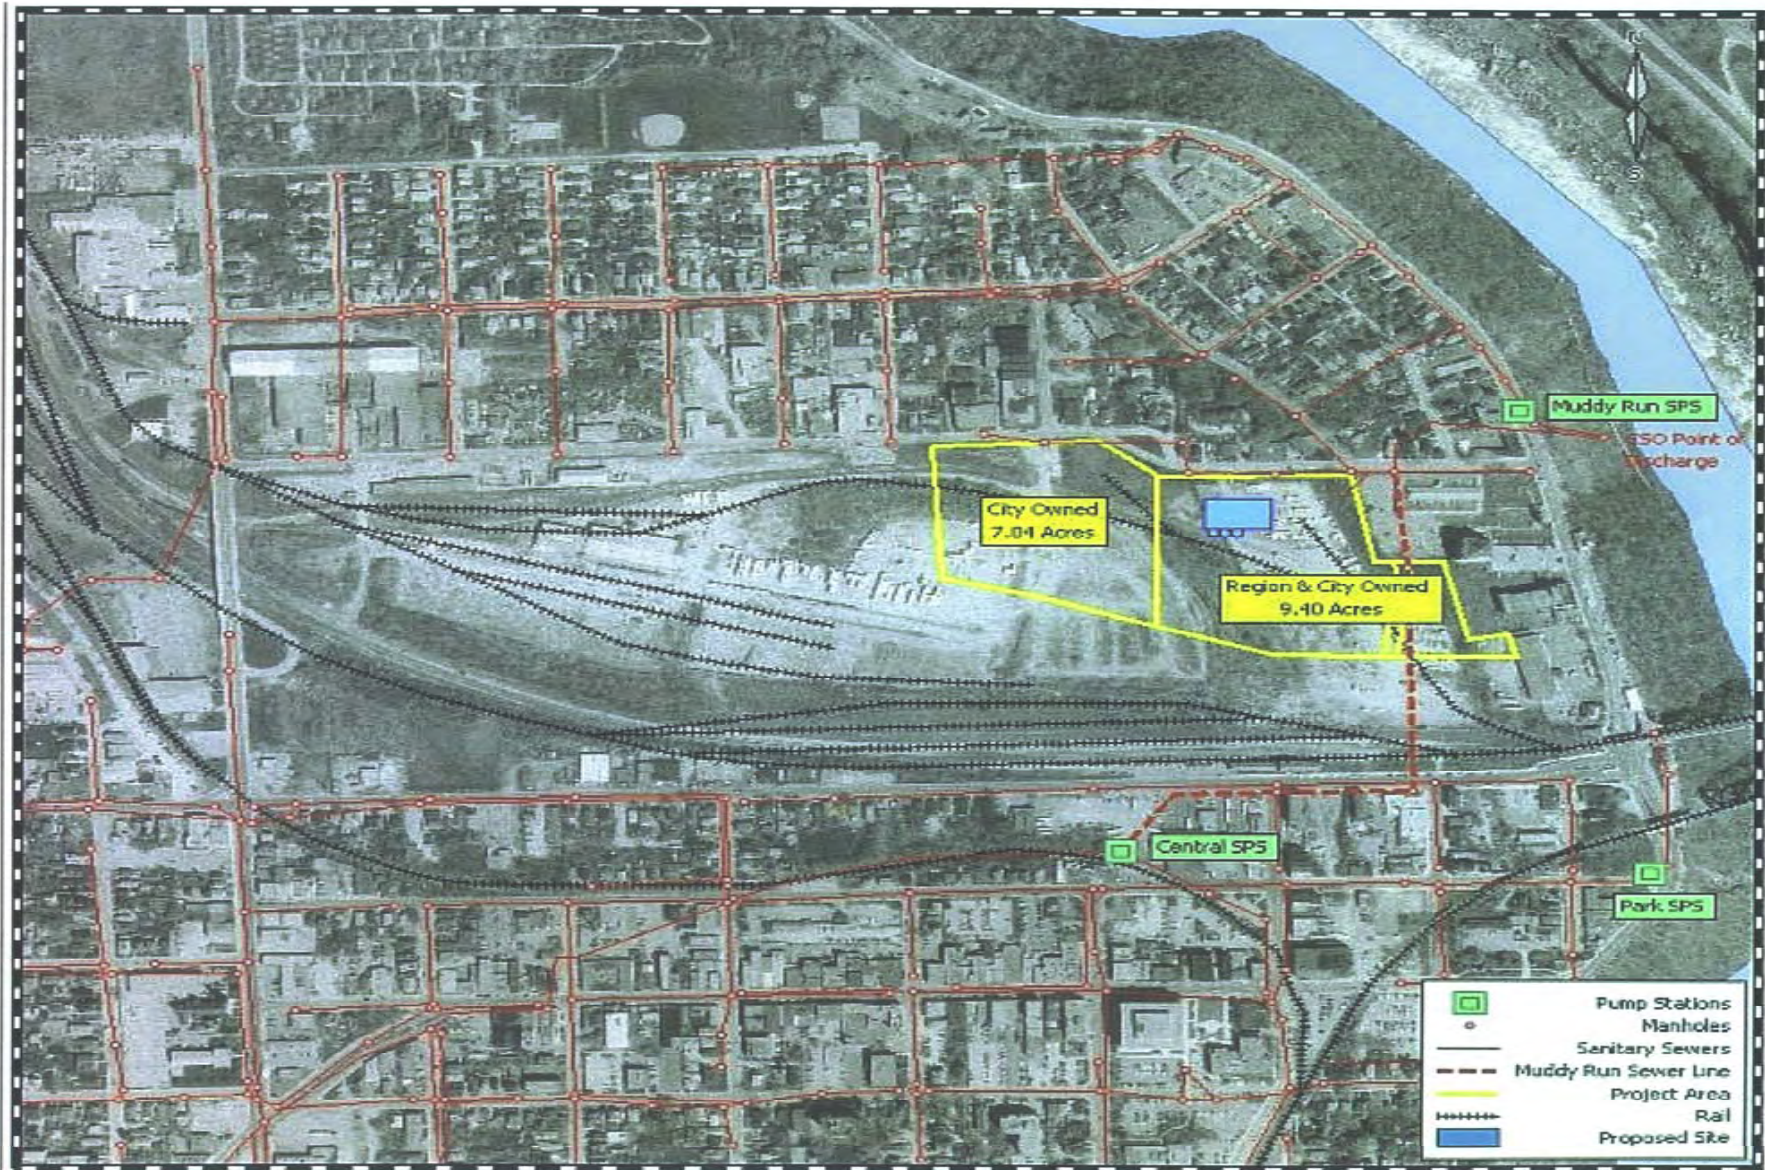

CSO / HRT Project Niagara Falls

- ◆ Two jurisdictions (Region/City)
- ◆ Many Consultants involved
 - Associated / Acres
 - CH2M Hill / Gore & Storrie
 - MacViro
 - Hydromantis
 - George C. Riek (CVS)
- ◆ Key Stakeholders
 - Niagara Region
 - City of Niagara Falls
 - Ministry of the Environment
 - Operations/Engineering Staff
- ◆ January 2004 to Present

Overflow (Central & Muddy Run P.S.)

HRT – Niagara Falls

Project Schematic

Muddy Run

- Largest CSO by volume.
- Accounts for between 50 to 60% of CSO load to Niagara river.
- 90% control level equates to a treatment rate of 1800 l/s.
- Total annual average CSO discharge of 400,000 cubic metres directly to Niagara river over an average 37 events

Project Characteristics

- ◆ Upgrade major Sewage Pumping Station
- ◆ Control major CSO (60%)
- ◆ Combine 2 project elements
- ◆ Meet requirements
 - P. Station satisfying capacity, safety, life-cycle cost needs, (capacity of 800 L/S) (69.1 ML/D 15.3 MIGD/18.2 US MGD)
 - Reduction of CSO per F-5-5 including 50%TSS/30% BOD/90 mg/l for 90% A.A. Flow (storage 25,000m³ or HRT)
 - Achieve F-5-5 as minimum and flexibility in future (HRT treatment risk)
- ◆ Project Base Costs
 - P. station 6.4 m
 - HRT 5.5 m
 - Related (site/piping) 8.4m

 - Total \$20.3 m

Summary of Alternatives

<i>Altern. No.</i>	<i>Brief Description</i>	<i>Value</i>	<i>Approx. Construction Cost^a</i>
Baseline	Design Concept.	Does not fully meet Region's Performance Objectives	\$20,300,000
A1	Least Cost Modification of baseline project. PS and HRT at Central site.	Will meet Region's Performance Objectives and may meet F-5-5	\$19,600,000
A2	Modification of baseline project plus expansion to add value. HRT at Central site; PS at Muddy Run.	Will meet Region's Performance Objectives and may meet F-5-5, but more risk of not meeting than for Alternative A1	\$23,500,000 ^a
B	Treat CSO at the Stanley Avenue WWTP.	Will meet both Region's Performance Objectives and the intent of F-5-5 and may meet intent of F-5-1.	\$22,800,000
C	Provide 25,000 m ³ storage at new Central PS site; do not add any other value.	Will meet both Region's Performance Objectives and the intent of F-5-5 and may meet intent of F-5-1.	\$26,000,000
D	Consolidate all pump stations into one by constructing deep tunnel to store and convey CSOs to WWTP for treatment.	Will meet both Region's Performance Objectives and the intent of F-5-5 and may meet intent of F-5-1.	\$30,000,000 to \$40,000,000

^aCosts for A2 have been corrected from the original "Powerpoint" presentation to include the cost of the upgraded (two 13 m dia vortexes) HRT facility.

Welland WTP Upgrade Project

- ◆ Existing water plant serving Welland and Pelham 102 ML/D (85 actual) capacity
 - ◆ Upgrade needed to meet MOE inspection recommendations (CT or UV) and 10 year growth/demand needs
 - ◆ Base project to satisfy increased demand of 90 to 107 ML/D
 - ◆ Cost - \$21.4 million
- 
- A decorative graphic at the bottom right of the slide, consisting of a stylized mountain range silhouette in various shades of teal and blue.

Welland Water Treatment Plant

- Located on Merritt Island at the intersection of the Old Welland Canal and the Welland River
- The original plant (1910) history of nearly 100 years
- Several additions and upgrades (1925 - 1990's)
- Conventional water treatment plant (gross cap.109.1 ML/d) with 2 process streams.

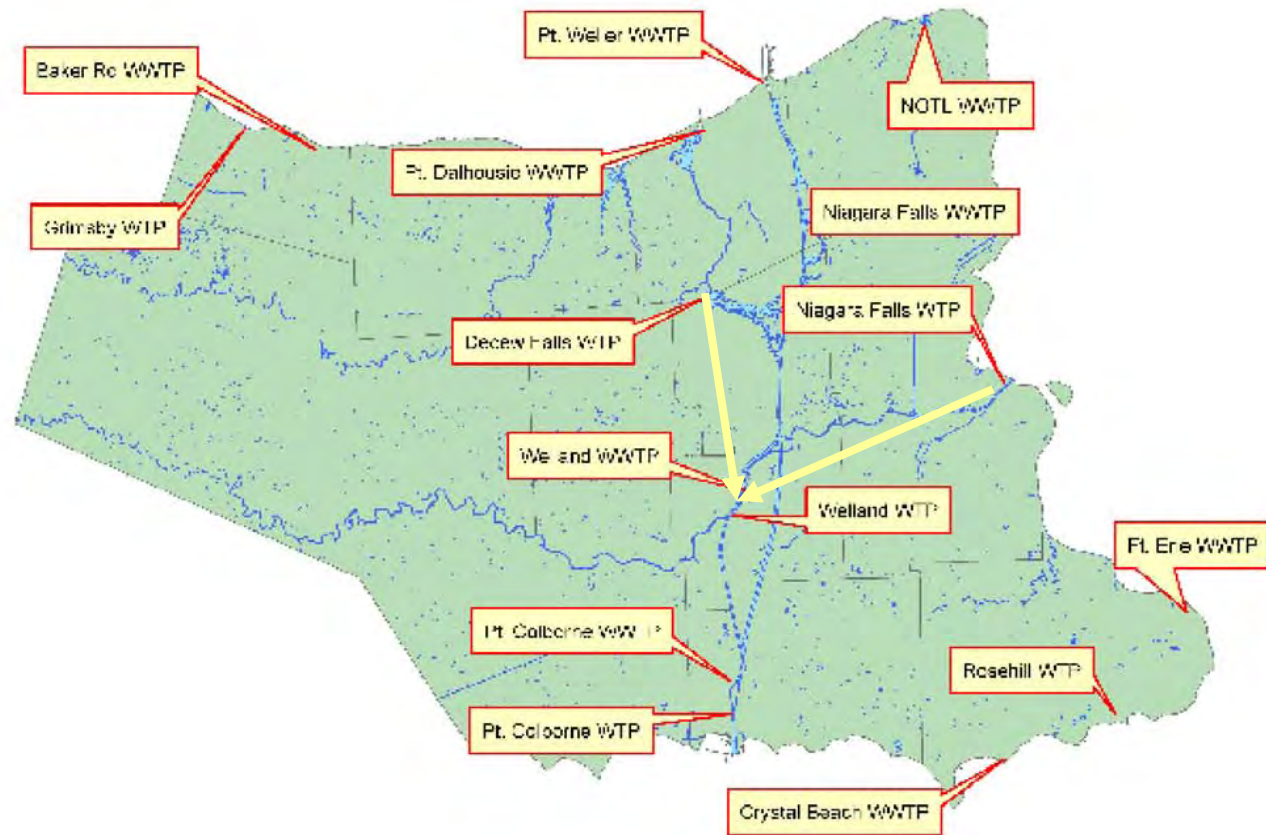

Alternatives

◆ 3 major options

- 1. Upgrade Welland WTP (baseline)
 - ◆ Capital \$21.4 m
 - ◆ Life cycle (20 yr) \$177 m

- 2. Decommission Welland and interconnect to both DeCew Falls/Niagara Falls
 - ◆ Capital \$25.2 m
 - ◆ Life cycle \$183 m

- 3. De-rate Welland WTP with interconnection to Decew Falls (to 2026)
 - ◆ Capital \$25m (20-29m)
 - ◆ Life cycle \$174 – 197 m

Water & Wastewater Facilities

Key Issues

- ◆ Existing plant since 1926
 - (replacement ??)
- ◆ Located on Merritt Island
 - (value as park, major cultural site etc.)
- ◆ Costs are 30% plus/minus
- ◆ Removing plant, major impact on other capital projects and plant capacities
- ◆ Internal idea sharing and/or conflicts
- ◆ Plant in community
 - (political and labour issues)

Future VE

- ◆ Used on Welland CSO and Separation Project
- ◆ Wainfleet Servicing (preliminary stage)
 - Class Environmental Assessment
 - \$29m Sanitary
 - \$19m Water
 - No public acceptance (need?)
 - Options not fully explored
 - Don't believe your data
 - Don't trust you
 - Look at other options
- ◆ Need
 - More data
 - Technical confidence
 - Meetings with customers / residents
 - VE exercise will help

Is VE Useful to Niagara

◆ Yes

– Three successful projects

- ◆ Project better meets need
- ◆ All stakeholders involved
- ◆ Buy in
- ◆ Realistic base project & cost
- ◆ Serious alternatives developed
- ◆ Costs more confident
- ◆ Improved design
- ◆ Lessons for this project applied to others

– Different Projects

- ◆ Wainfleet class EA
- ◆ Partial VE on some
- ◆ Apply to Master Plan Projects

◆ Re-visit in two years

Thank You
